

Incident Response Policy – Meridian Analytics Inc.

Severity Levels

Incidents are classified as Severity 1 (critical, client-impacting or data breach), Severity 2 (significant but contained), or Severity 3 (minor, no immediate business impact). Severity 1 incidents trigger immediate escalation to the CTO and Legal.

Response Timeline

Severity 1 incidents must be acknowledged by the on-call IT Security engineer within 15 minutes and must have an initial containment action within 1 hour. Severity 2 incidents must be acknowledged within 2 hours.

Communication Protocol

For any incident involving potential client data exposure, the Legal department and affected client's designated contact must be notified within 24 hours of confirmation, in accordance with contractual and regulatory obligations.

Post-Incident Review

Within 5 business days of resolving a Severity 1 or Severity 2 incident, the IT Security team must produce a post-incident report covering root cause, timeline, impact, and remediation steps, to be reviewed by leadership.

Data Breach Notification

In the event of a confirmed data breach involving personal data, Legal will determine notification obligations under applicable law (e.g., GDPR, state breach notification laws) and coordinate the notification process with affected individuals and regulators as required.
